We'll collect the sample tomorrow. We'll collect additional samples after the maintenance to see how culture results are affected (no metagenomics sample required).

I prefer earlier as I am taking the day off on Thursday.

So WaterGen changed their schedule again and now plan to be here Tuesday afternoon and Wednesday for maintenance. Based on that schedule, sampling on Wednesday may be tough- would you prefer to collect it prior to service (today or tomorrow morning) or afterwards (Thursday)? Thinking the latter may be better for having to count plates.

Thanks,

Michael
